ACOUSTIC REVIVE RR-77

## **THE ACOUSTIC REVIVE EFFECT**

Following the RD3 that demagnetises cd's very efficiently (Diapason gold medal 2007) and the Quartz RIQ5010 which are also strongly convincing, Acoustic Revive proposes the R-77 with again the ability to make incontestable improvements.

The Schumann resonance, around 7.83 Hz, discovered by the German scientist of the same name in 1954 corresponds to the fundamental resonance of the earth – essential, we are assured, for the vital equilibrium of plants, animals and humans. In recent years this natural frequency has been much disturbed by radio and electro-magnetic waves. The RR-77 recreates this frequency.

Acoustic Revive suggest placing the RR-77 at least one meter from the floor and from the audio system and to power it by a different outlet than the audio system. Several attempts are normally required to achieve the best placement of the RR-77. The result obtained is rather astonishing, the soundstage becomes more natural and real, violins become more smooth and extended and voices become more present and purposeful. More surprising is to hear the musicians and instruments in their own recording environment without any adverse effects or aggressiveness.

We can not state clearly enough that these devices are for those who are passionate and cultivated, capable of appreciating these subtle but precious improvements.
