musicBox

...when you need more than a fancy table radio

**Choices.** Table radios have come a long way. They're a good choice for many since they are compact and sound fine for background listening. However, if you need something a little more, the performance and versatility of the **musicBox** far surpass any table radio sound and technology on the market.

**Performance & Technology.** You'll be amazed when you plug your iPod into the **musicBox's** built-in PURE DIGITAL iPod dock. It makes you iPod perform like your CD player. Add in a great DAC, special vacuum tube preamplifier circuitry and the MOSFET power amplifier section of the **musicBox** and you have a recipe for magic.

**Versatility.** Plug in your iPod touch and gain access to nearly unlimited music content. Sources such as Pandora, Rhapsody, Groove Shark and radio stations from around the world are at your fingertips. Want to watch those great music videos, TV shows and movies you've downloaded to your iPod the way they were meant to be seen? Just connect the **musicBox's** high-resolution "component video out" signal to your big-screen television and sit back and enjoy your favorites in all their wide-screen glory! The ability of the **musicBox's** internal digital to analog converter to process and play all your favorite digital program sources makes the **musicBox** a "must have" in your office, on your desktop, in the kitchen, in the the den, or in the bedroom.

**Desktop rescue.** Strapped to a desk and computer for long periods of time? Why not make the best of it? Just plug your computer into the **musicBox** with a USB cable and place the matching mB3 speakers (pictured above) on either side of your monitor. The music will be wide and deep, with a solid image in the middle. "Computer music" now takes on a rich character with tone, texture and musical layers that transport you back to the original performance . . . but you've never even left your desk!

**For your ears only.** In a cubicle? Want to rock out late at night? The **musicBox** automatically mutes the speakers when you plug in your headphones. But you're still getting the full benefit of the **musicBox's** tube preamplifier section (check out the glow of the tube behind the front panel window!). The sound is your secret.

**Want more?** Love the sound of the basic **musicBox** system? Wait 'til you hear the **musicBox** with the optional DS4.5 speakers! Your upgraded **musicBox** system fills not only a larger room – it fulfills larger expectations. Deeper, more powerful bass – an expanded stereo stage – extended high-frequency response.

**PURE DIGITAL iPod Dock**  
Virtually all iPod docks today pass only the "analog" signal from your iPod. Not so with the **musicBox**! The **musicBox** sends the digital "1's and 0's" from your iPod directly to its own internal high performance DAC. That's why we call it PURE DIGITAL. And that's how your iPod – plus the **musicBox** – produces sound to rival a high-end audiophile CD player.

**musicBox:**  
A small, elegant system redefining performance.

Still want a table radio?

musicBox mB3 system \$799. musicBox DS4.5 system \$999. musicBox \$699.
